The status of claims in the case is as follows:

SUB CI7

BI

1.   [Currently amended] A system for managing concurrent scheduled or on-demand replication of subscriptions for different user credentials within a workflow, enterprise and mail-enabled web application server and platform, comprising:

a database for storing user passwords;

a plurality of subscriptions, each identified by a subscription user credential including password, user name and authenticatable electronic certificate;

a service manager for executing concurrent replication of a plurality of said subscriptions on schedule or demand for which a password corresponding to said subscription credential has been provided by a user or found in said database; and

said service manager replicating to a user browser an offline subscription containing client-side runtime and

17 <u>framework for a fully functioning offline server</u>.

1 2.   [Currently amended] A system for managing concurrent
2 replication of subscriptions within a workflow, enterprise
3 and mail-enabled web application server and platform,
4 comprising:

5   a plurality of web-enabled, offline subscriptions each
6   identified by user credentials including user
7   identifier and subscription password;

8   a service manager for displaying to a user a plurality
9   of said subscriptions, for enabling user selection of
10   replication parameters for each said subscription, ~~and~~
11   for maintaining replication schedules for said
12   subscriptions, ~~and for~~ <u>replicating to a user browser an</u>
13   <u>offline subscription containing client-side runtime and</u>
14   <u>framework for a fully functioning offline server</u>; and

15   a utility responsive to user input for concurrently
16   replicating on schedule or demand subscriptions for
17   which said user has entered a user password matching
18   said subscription password.

1   3.   [Original]   The system of claim 2, said service manager

2   further displaying disk space usage for enabling user

3   limitation of usage or removal of said subscription.

1   4.   [Original]   The system of claim 2, wherein said

2   plurality of web enabled, offline subscriptions are from

3   multiple servers and from multiple user identities, and

4   selectively having separate database groupings and

5   synchronization rules and properties.

1   5.   [Original]   The system of claim 2, further comprising

2   a user password database for optionally storing said

3   user password for each of said plurality of

4   subscriptions; and

5   said utility being selectively responsive to a matching

6   user password in said password database for replicating

7   a corresponding subscription and responsive to no

8   matching user password in said password database for

9   prompting for user input of said user password before

10   replicating said corresponding subscription.

1   6.   [Currently amended]   A method for managing concurrent

𝓑ℓ

2 replication of subscriptions within a workflow, enterprise

3 and mail-enabled web application server and platform,

4 comprising the steps of:

5   storing user passwords in a password database;

6   associating a subscription password with each of a

7   plurality of subscriptions, each said subscription

8   containing client-side runtime and framework for a

9   fully functioning offline server for offline operation

10   of a client browser;

11   executing concurrent replication of a plurality of said

12   subscriptions on schedule or demand for which a

13   password corresponding to said subscription password

14   has been provided by a user or found in said database.

1   7.   [Currently amended] A program storage device readable

2   by a machine, tangibly embodying a program of instructions

3   executable by a machine to perform method steps for managing

4   concurrent replication of subscriptions within a workflow,

5   enterprise and mail-enabled web application server and

6   platform, said method steps comprising:

7   storing user passwords in a password database;

8   associating a subscription password with each of a
9   plurality of subscriptions;

10   executing concurrent replication of a plurality of said
11   subscriptions on schedule or demand for which a
12   password corresponding to said subscription password
13   has been provided by a user or found in said database,
14   each said subscription containing client-side runtime
15   and framework for a fully functioning offline server
16   for offline operation of a client browser.

1   8.   [Currently amended] A system for issuing user
2   identifiers for subscriptions in a workflow, enterprise and
3   mail-enabled application server and platform, comprising:

4   a database of security domains;

5   system electronic certificates for authenticating user
6   credentials;

7   each said subscription containing client-side runtime
8   and framework for a fully functioning offline server

9   for offline operation of a client browser; and

10   a tool responsive to said database and said

11   certificates for distributing user identifiers

12   selectively based upon security domain through auto

13   generation, directory lookup or user prompt.

1   9.   [Original] The system of claim 8, further comprising:

2   an identifier repository database;

3   a security domain document in said database of security

4   domains for use in locating in said identifier

5   repository database a user identifier selected for

6   distribution based upon directory lookup.

1   10.   [Original] The system of claim 8, further comprising:

2   a security domain document from said database of

3   security domains for specifying an electronic

4   certificate for use in auto generating a user

5   identifier selected for distribution based upon auto

6   generation.

1   11.   [Original]   The system of claim 8, further comprising:

2   prompt code for execution in response to a need for a

3   user entered user identifier.

1   12.   [Original]   The system of claim 8, further comprising:

2   a security model for enabling the distribution of

3   previously deployed user identifiers by table lookup.

1   13.   [Original]   The system of claim 9, further comprising:

2   prompt code for execution in response to a need for a

3   user entered user identifier; and

4   a security model for enabling the distribution of

5   previously deployed user identifiers by table lookup.

1   14.   [Currently amended]   A method for issuing user

2   identifiers for subscriptions in a workflow, enterprise and

3   mail-enabled application server and platform, comprising the

4   steps of:

5   providing a database of security domains;

6   responsive to said database, distributing user

7   identifiers selectively based upon security domain

8   through auto generation, directory lookup or user

9   prompt; and

10   each said subscription containing client-side runtime

11   and framework for a fully functioning offline server

12   for offline operation of a client browser.

1   15. [Original] The method of claim 14, further comprising

2   the steps of:

3   providing an identifier repository database of user

4   identifiers;

5   locating a security domain document in said database of

6   security domains for accessing in said identifier

7   repository database a user identifier selected for

8   distribution based upon directory lookup.

1   16. [Original] The method of claim 14, further comprising

2   the step of:

LOT920000006US1   9   S/N 09/596,783

3 locating a security domain document in said database of

4 security domains for specifying an electronic

5 certificate for use in auto generating a user

6 identifier selected for distribution based upon auto

7 generation.

1 17. [Original] The method of claim 14, further comprising

2 the step of:

3 executing user prompt code response to a need for a

4 user entered user identifier.

1 18. [Original] The method of claim 14, further comprising

2 the step of:

3 responsive to a security model, distributing previously

4 deployed user identifiers by table lookup.

1 19. [Original] The method of claim 14, further comprising

2 the steps of:

3 executing prompt code in response to a need for a user

4 entered user identifier; and

5   responsive to a security model, enabling the

6   distribution of previously deployed user identifiers by

7   table lookup.

1   20.   [Currently amended] A program storage device readable

2   by a machine, tangibly embodying a program of instructions

3   executable by a machine to perform method steps for issuing

4   user identifiers for subscriptions in a workflow, enterprise

5   and mail-enabled application server and platform, said

6   method steps comprising:

7   providing a database of security domains; <u>and</u>

8   responsive to said database, distributing user

9   identifiers <u>for subscription containing client-side</u>

10   <u>runtime and framework for a fully functioning offline</u>

11   <u>server for offline operation of a client browser</u>

12   selectively based upon security domain through auto

13   generation, directory lookup or user prompt.

1   21.   [Currently amended] A computer program product

2   configured to be operable for managing concurrent scheduled

3   or on-demand replication of subscriptions for different user

4   credentials within a workflow, enterprise and mail-enabled

5   web application server and platform, according to the steps

6   of:

7   storing user passwords in a password database;

8   associating a subscription password with each of a

9   plurality of subscriptions; each said subscription

10   containing client-side runtime and framework for a

11   fully functioning offline server for offline operation

12   of a client browser;

13   executing concurrent replication of a plurality of said

14   subscriptions on schedule or demand for which a

15   password corresponding to said subscription password

16   has been provided by a user or found in said database.

1   22.   [Currently amended] A computer program product

2   configured to be operable for issuing user identifiers for

3   subscriptions in a workflow, enterprise and mail-enabled

4   application server and platform, according to the steps of:

5   providing a database of security domains;

6   each said subscription containing client-side runtime
